

# UNITED PARTNER MEETING October 2018

#### PARTNER RELATIONS

- Invoice Due Dates
- Partnership Department Contacts
- Cost breakdown Update
- Email address required
- Company name change
- Partner Portal

#### **EQUIPMENT SERVICES**

- Avoidable Repairs
- Auto Scrubber Trouble Shooting
- Burnisher Trouble Shooting
- Minor Repairs you can do yourself
- Equipment Training Videos

#### RETENTION

- 24hr store cleaning safety/slip & fall
- Winter Care Tips
- Winter Budget
- Materials

# **Partner Relations**

October 2018

## **Invoice Due Dates**

- The 2<sup>nd</sup> of every month
- Non-compliance fees for late invoices \$25-\$100
- Warning letter for late invoices
- Payment received 30days from invoice submitted
- Revisions if required have the same timelines

ONTARIO WEST - (BC, Alberta, SASKATCHEWAN, MANITOBA, ONTARIO) Regional Partner Manager – Wade LaRose wade.larose@unitedservicesgroup.ca Mobile: (647)-241-4521

Partner Program Coordinator – Kelly Baker kelly.baker@unitedservicesgroup.ca Toll free: <u>1 (877)-289-4299 EXT:281</u>

QUEBEC EAST - (Quebec, New Brunswick, Nova Scotia, Newfoundland, PEI) Regional Partner Manager – Genevieve Tardy <u>Genevieve.Tardy@unitedservicesgroup.ca</u> Mobile: (514)-770-2296

DAY PORTERS - NATIONAL (All Regions) Partner Program Coordinator – Anna Liparoti anna.liparoti@unitedservicesgroup.ca Toll free: <u>1 (877)-289-4299 EXT: 257</u> Partner Program Coordinator – Jacqueline Guerrero jaqueline.guerrero@unitedservicesgroup.ca Toll free: <u>1 (877)-289-4299 EXT: 307</u>

- Cost Breakdowns Update
- Partner Email Addresses Mandatory as United sends our communication to all partners via emails
- Company Name Change Your Partner Relations Rep needs to know

(Will avoid possible fee to reverse tax payment to wrong company name)

- Partner Portal Log in to your new portal for all your Training and view your communication updates
  - Login: partnerusg
  - Password: teamwork

# **United Equipment Services**

## **Batteries**

- Cost: \$1,000 \$2,400
- Maintenance Advice:
  - Check batteries a few times a week.
  - If needed add water to cover the top of plates.
  - Low water level will cause batteries to burn out.

## Vacuum Motor / Float Switch

- Cost: \$200-\$500
- Maintenance Advice:
  - Float switch shuts off Vac Motor when tank is full, and should be kept clean at all time.
  - If not kept clean, water can overflow, damaging Vacuum Motor and Castor Wheels.

### **Squeegee Assembly**

- Cost: \$200-\$600
- Maintenance Advice:
  - Remove and clean after every use. Not cleaning will cause squeegee not to perform properly which will leave water on floor.
  - This will be a health and safety issue as it can cause a slip and fall which can result in a law suit.
  - Not removing when parking scrubber may cause bent squeegee brackets by hitting cage causing avoidable repair costs.

## Drain Hoses / Cap

- Cost: \$130-\$180
- Maintenance Advice:
  - Look out for your surroundings so they do not get damaged.
  - Do not loose or misplace cap. Will cause poor suction, water leaks and unnecessary costly service calls. It is also a health and safety issue causing slip and falls which can lead to a law suit.

## Actuator

- Cost: \$450-\$550
- Maintenance Advice:
  - Do not hit front of machine while operating. This will damage actuator.
  - When transporting keep deck raised

## **Ignition Key**

- Cost: \$100-\$130
- Maintenance Advice:
  - Do not loose or misplace. High cost just to deliver keys and down time due to waiting for keys. Floors will not be properly cleaned resulting in customer complaints.

TENNANT		This is a guide for daily post-	Troubleshooting Chart			
	Autoscrubbe	operations only. Machine operators	Problem	Cause	Remedy	
	Autosciubbe	must read operating	Trailing water behind machine	Worn squeegee blades	Rotate or replace squeegee blades	
		manual before	Poor or no water pickup	Squeegee out of adjustment	Adjust squeegee	
United		operating machine.		Vacuum hose clogged	Flush vacuum hoses	
Services Group	Care Guide			Vacuum inlet filter dirty	Clean fan inlet filter

Daily or After Each Use/ Post-Operation Checklist	Charge if needed	Charging & Maintaining Batteries		Vacuum hose to squeegee disconnected or damaged	Reconnect or replace vacuum hose	
1. Drain recovery tank.		1. Stop machine in well ventilated area. Turn machine power off. Lock solution tank in read position		Vacuum hose to recovery tank disconnected or damaged	Reconnect or replace vacuum hose	
	No.	raised position.		Solution tank not completely closed	Check and remove obstructions	
	6. Remove, clean or replace pads.			Torn or damaged seals on solution tank	Replace seals	
			Vacuum will not turn on	Recovery tank full	Drain recovery tank	
<ol> <li>Flush recovery tank with clean water.</li> </ol>		2. Check water level in all battery cells. Add water to raise level to 12mm (0.4") below sight tubes. Do Not overfill.		Foam filling recovery tank	Drain recovery tank	
water.	(A/Y V				Use less or change detergent in solution tank	
					Add defoamer into recovery tank	
				Vacuum circuit breaker tripped	Reset circuit breaker (Fan Sign)	
	7. Clean and check squeegee for	(P)		Recovery tank float switch stuck	Clean float switch and reset key switch	
	wear or damage		Little or no solution flow to the	Solution tank empty	Fill solution tank	
3. Rinse off water level switch.			floor	Solution control cable broken or out of adjustment	Replace or adjust solution control cable	
				Solution flow tuned off	Turn solution flow on	
		FLUD -		Solution supply line plugged	Flush solution supply line	
		3. Plug charger connector into battery connector. Leave tank in raised position for charging.		Solution supply line filter dirty	Cleaned solution supply line filter	
	Adjusting Squeenee			Solution solenoid clogged or stuck		
					Clean or replace solution solenoid	
4. Remove, clean or replace vacuum fan filter.	deflection -12mm (1/2")on floors.		Poor scrubbing performance	Debris caught on scrubbing brushes or pads	Remove debris from brushes or pads	
				Improper detergent, brushes, or	Follow Cleaning Manuel instructions	
		4. Plug battery charger into wall outlet. Charger will start and stop automatically.		Worn scrub brushes, or pads	Replace scrub brushes or pads	
	12 mm (1/2") smooth ©ors			Scrub brush motor circuit breaker	Reset circuit breaker (Brush Sign)	
				tripped	Even out brush pressure, level scrub heads	
					Apply more scrubbing solution on floor	
	15 mm (5/8*) rough (born			Low battery charge	Charge batteries until charger turns off	

## Engine / Heads

- Cost: \$1,000-\$2,700
- Maintenance Advice:
  - Clean after each shift.
  - Remove dust around engine.
  - Remove and clean all dust filters. This will help cool engine and run more efficient. An engine running hot will cause major engine damage and high neglect repair costs.

## Battery

- Cost: \$90-\$200
- Maintenance Advice:
  - Do not tie handle back. When handle tied back and starting engine it causes the clutch to engage. This causes strain on the battery and engine.

## Pad-holder / Flexi-Disc Assembly

- Cost: \$150-\$680
- Maintenance Advice:
  - Do not run pad to thin.
  - Check and replace when needed. Running a pad too thin will cause velcro, center lock, and pad holder to wear out.

## **Dust Bag**

- Cost: \$135-\$160
- Maintenance Advice:
  - Remove and clean daily. A dirty filled dust bag will cause a health and safety issue and dust will accumulate all over machine causing overheating and severe engine damage.

# **Retention**

SAFETY OUR TOP PRIORITY: Store Cleaning Expectations SAFE OPERATIONS

- When using Auto scrubber place two or more Caution Signs around area of clean (scrubbing).
- Always check for water leaking from squeegee. Mop up any water left behind immediately. If squeegee is not aligned make a service request.
- Be on the look out for customers and staff, don't assume the coast is clear.
- Operate scrubber at reasonable speed, don't use at max speed

# SAFETY TOP PRIORITY: Store Cleaning Expectations

## Slip & Fall

 Document any accidents that occurred with date, time, description of incident, names of anyone involved or present. Take photos. Send info to your Partner Relations Representative and your Area Manager immediately

## Waxing

 Tape off area with both Caution Sign Tape and Caution Floor Signs. Do not use paper towel or plastic wrap. Start at scheduled time to ensure drying time. Plan your schedules ahead with Area Manager and Store Managers. Make sure wax is properly dried before opening area to customers / staff.

- Only United tested and approved materials can be used in United contracted locations
- This is to ensure consistency throughout the country
- If you are unsure on what material is approved, please ask your Area Manager

## Sweep

- Sweep floors before washing. Do not use auto scrubber to sweep floors.
- Clean dust mops after each use, for heavy soiling mops can be laundered.

## Auto scrubber

- Use approved products by United only, such as **Envirostar Neutralizer** by Pioneer Eclipse or **Preference All Purpose Neutral Cleaner** by Dustbane.
- Low Salt 150 ml per tank.
- Med Salt 250 ml per tank.
- High Salt 350 ml per tank.

## Edge mop

• Mop all edges and corners where Auto scrubber cannot reach

## Bucket:

- 100 ml depending on salt, increase if needed. Change water as needed, especially if becomes dirty.
- Use correct pads on Auto scrubber:
- **3M Red Pads**. (New improved pads will be rolled out in October)
- Wash pads after each use.
- Flip or rotate pads for best results. Change PADS once worn or no longer productive.

## **3M Brushes**

- Stores that use a high sand and salt mixture during winter season should use 3M brushes that will help elevate wax erosion that regular pads cause on floor finish.
- This process assists in savings by reduction in purchases of washing pads monthly and increase wax durability, consequently cutting down on scrub and wax.

## Buff: Min 2 hrs.

• Burnish every night after washing, use Aqua pads, flip or rotate after 50% of store buffed. Walk don't run, hold buffer center of handle not by the sides.

Winter budget (start date/end date/which areas have extensions)

**Start:** Once **snow is on the ground winter commences**. Salt / Sand / gravel is laid.

**Finish:** Once winter weather passes and **snow stops.** Salt / Sand / Gravel is not being laid on surface.

## Wax:

• Start building up wax levels before winter sets in. At least 8 coats.
